## Introduction

**Best Jewellery ERP CRM Software for 2025: Features & Benefits**A CRM application for jewelry management is specialized customer relationship management software designed for the jewelry industry to streamline operations, boost sales, and enhance customer loyalty. These systems centralize customer data, track purchase history, and manage customer preferences to enable personalized marketing, targeted services, and improved customer communication across multiple channels. By integrating sales, inventory, and customer service functions, a jewelry CRM provides a unified platform for deeper business insights, efficient operations, and ultimately, sustained growth.

## Project Overview

A project overview for a CRM application in jewel management focuses on creating a centralized system to streamline customer interactions, manage sales and inventory, personalize marketing, and analyze customer behavior to drive growth and improve customer loyalty. Key components include a client database with purchase history, automated communication tools, sales tracking, inventory management, and reporting features. The goal is to provide a unified platform that enhances operational efficiency, boosts sales, and delivers personalized customer experiences.

T

## Objects

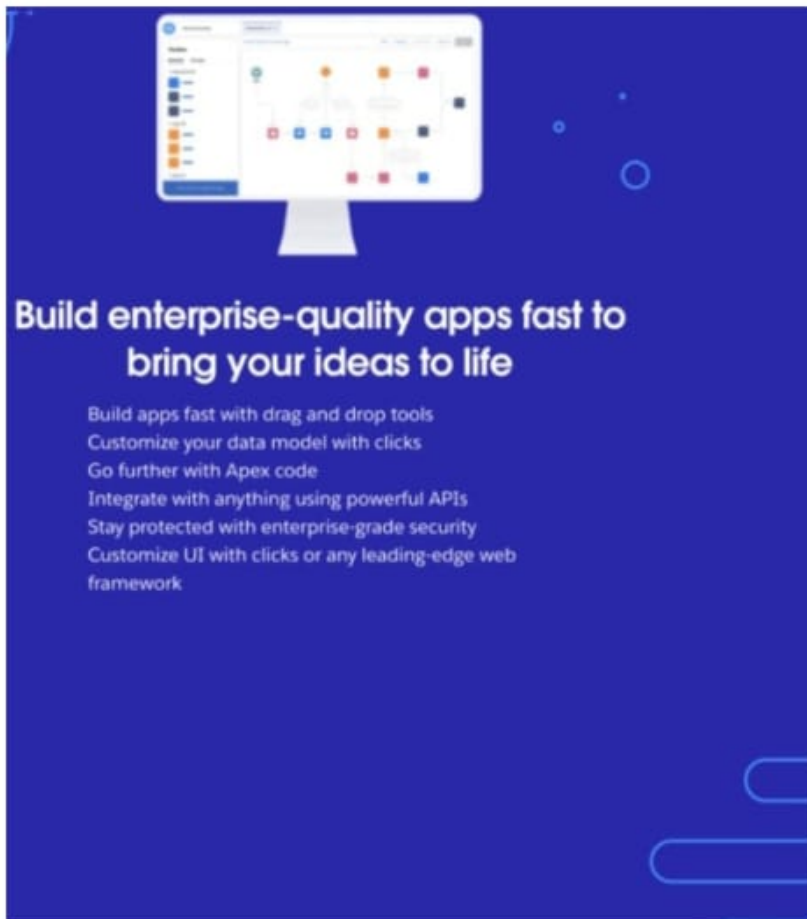

Project objectives are specific, measurable outcomes that define the purpose and success criteria of a project, guiding the team's actions and resource allocation. They are typically written using the SMART framework—Specific, Measurable, Achievable, Relevant, and Time-bound—to ensure clarity and trackability. By setting clear objectives, project managers align stakeholders, provide direction, and establish a basis for evaluating the project's success.

## Salesforce

### Creating Developer Account

Creating a developer org in salesforce.

- Go to <https://developer.salesforce.com/signup>
- On the sign up form, enter the following details :

## Sign up for your Salesforce Developer Edition

A full-featured copy of the Platform, for free

Complete the form to start your free trial. Our team will be in touch to help you make the most of your trial.

First Name\*

Last Name\*

Email\*

Role\*

Company\*

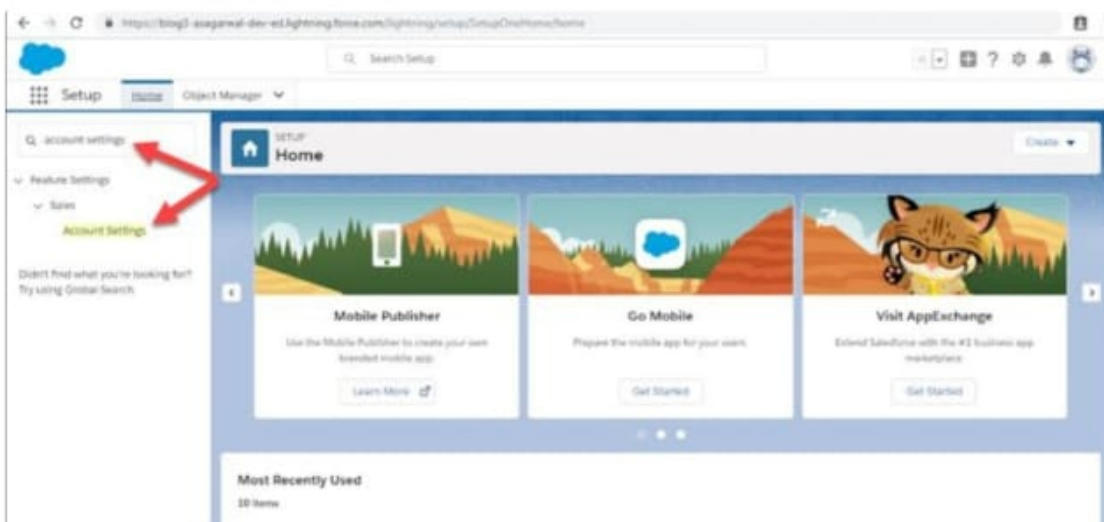

Country/Region\*

Postal Code\*

1. First name & Last name
2. Email
3. Role : Developer
4. Company : College Name
5. County : India
6. Postal Code : pin code
7. Username : should be a combination of your name and company  
This need not be an actual email id, you can give anything in the format :  
username@organization.com Click on sign me up after filling these.

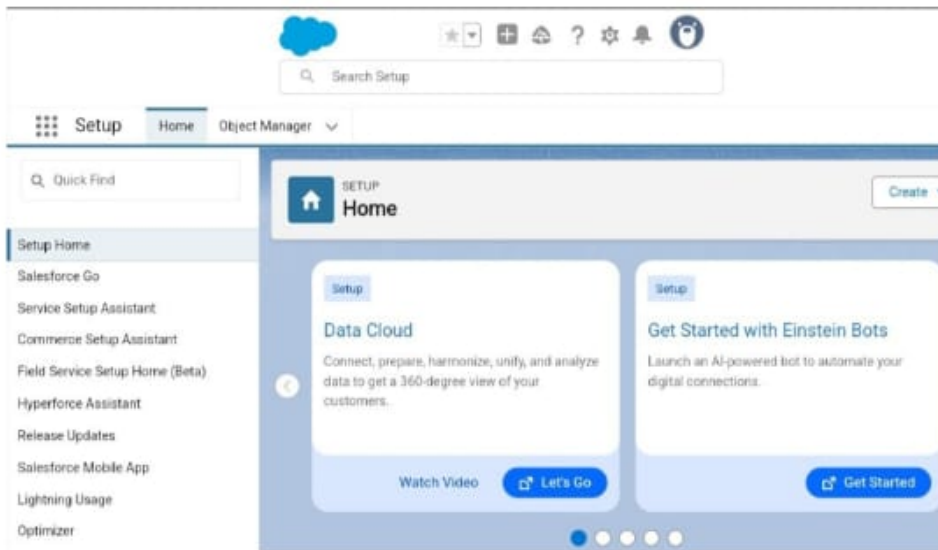

## Account Activation

1. Go to the inbox of the email that you used while signing up.
  2. Click on the Reset Password to activate your account.
  3. The email may take 5-10mins. Click on Reset Password
- Give a password and answer a security question and click on change password.
- Then you will redirect to your salesforce setup page.

# CREATE JEWEL CUSTOMER OBJECT

- The purpose of creating a Jewel Customer custom object is to store and manage information.
- From the setup page >> Click on Object Manager >> Click on Create >> Click on Custom Object.

- Enter the label name : Jewel CUSTOMER
- Plural label name : Jewel Customers

This screenshot shows the 'New Custom Object' page in Salesforce Setup. The page title is 'New Custom Object'. Below the title, there is a yellow message box stating: 'Permissions for this object are disabled for all profiles by default. You can enable object permissions in permission sets or by editing custom profiles. Tell me more! Don't show this message again.' The main section is 'Custom Object Definition Edit', which includes a 'Custom Object Information' sub-section. This section contains fields for 'Label' (with an example 'Account'), 'Plural Label' (with an example 'Accounts'), 'Starts with vowel sound' (a checkbox), 'Object Name' (with an example 'Account'), and a 'Description' text area. At the bottom, there are 'Context-Sensitive Help Setting' options: 'Open the standard Salesforce.com Help & Training window' (selected) and 'Open a window using a Visualforce page'.

- Enter Record Name Label and Format  
RECORD NAME >> CUSTOMER NAME
- DATA TYPE >> TEXT

**Enter Record Name Label and Format**

The Record Name appears in page layouts, key lists, related lists, lookups, and search results. For example, the Record Name for Account is "Account Name" and for Case it is "Case Number". Note that the Record Name field is always called "Name" when referenced via the API.

Record Name  Example: Account Name

Data Type  Warning: If you plan to insert a high volume of records in this object, via the API for example, use the Text data type.

**Optional Features**

☐ Allow Reports  
☐ Allow Activities  
☐ Track Field History  
☐ Allow in Chatter Groups  
☐ Enable Licensing [?](#)

**Object Classification**

When these settings are enabled, this object is classified as an Enterprise Application object. When these settings are disabled, this object is classified as a Light Application object. [Learn more](#)

☒ Allow Sharing  
☒ Allow Bulk API Access  
☒ Allow Streaming API Access

**Deployment Status** [What is this?](#)

☐ In Development  
☒ Deployed

**Search Status**

When this setting is enabled, your users can find records of this object type when they search. [Learn more](#)

☐ Allow Search

**Object Creation Options (Available only when custom object is first created)**

☐ Add Notes and Attachments related list to default page layout  
☐ Launch New Custom Tab Wizard after saving this custom object

- Click on Allow reports.
- Allow search and click Save.

## Create Item Object

The purpose of creating a Item object is to manage the inventory of gold and silver items.

### TO CREATE AN OBJECT:

From the setup page >> Click on Object Manager >> Click on Create >> Click on Custom Object.

- From the setup page >> Click on Object Manager >> Click on Create >> Click on Custom Object.
- Enter the label name >> Item
- Plural label name >> Items
- Enter Record Name Label and Format
- Data Type >> Auto Number
- Display Format >> Item-{00}

Starting Number >> 1

- Click on Allow reports.

Allow search >> Save.

# TABS

## Creating a Custom Tab

To create a Tab:(Customer)

- Go to setup page >> type Tabs in Quick Find bar >> click on tabs >> New (under custom object tab)
- Select Object(Jewel Customer) >> Select any tab style >> Next (Add to profiles page) keep it as default >> Next (Add to Custom App) keep it as default >> Save.

The screenshot shows the Salesforce Setup interface. The left sidebar has a search bar with 'Tabs' entered. Under 'User Interface', 'Rename Tabs and Labels' is selected, and 'Tabs' is highlighted. The main content area is titled 'New Custom Object Tab' and shows 'Step 1 of 3: Enter the Details'. It prompts the user to 'Choose the custom object for this new custom tab. Fill in other details.' There are fields for 'Object' (set to 'None'), 'Tab Style' (set to 'None'), and an optional 'Splash Page Custom Link' (set to 'None'). A description field is also present. 'Next' and 'Cancel' buttons are at the bottom right.

To create a Tab:(Item)

- Go to setup page >> type Tabs in Quick Find bar >> click on tabs >> New (under custom object tab)
- Select Object(Item) >> Select the tab style >> Next (Add to profiles page) keep it as default >> Next (Add to Custom App) keep it as default >> Save.

## The Lightning App

To create a lightning app page:

- Go to setup page >> search “app manager” in quick find >> select “app manager” >>
- click on New lightning App.

The screenshot shows the Salesforce Setup interface for the 'Lightning Experience App Manager'. The left sidebar has a search bar with 'App manager' entered. Under 'Apps', 'App Manager' is selected, and 'External Client App Manager' is highlighted. The main content area shows '27 items • Sorted by App Name • Filtered by All appmenutems - TabSet Type, App Type'. A table lists various apps with columns for App Name, Developer Name, Description, Last Modified, App Type, and a checkbox. The table includes entries like 'All Tabs', 'Analytics Studio', 'App Launcher', 'Approvals', 'Automation', 'Bolt Solutions', and 'Community'.

	App Name	Developer N...	Description	Last Modifie...	App ...	VL...

(JewelCustomer,Item,CustomerOrder,Price,Billing,Reports, Dashboard)  
from the search bar and move it using the arrow button ? Next? Next.

**Search profiles (System administrator) in the  
search bar >> click on the arrow button >>  
save & finish.**

# FIELDS

## Creating Lookup Relationship

- A Lookup relationship is a type of relationship in Salesforce that connects two objects together based on a field known as the Lookup field. It establishes a relationship between a child object and a parent object, allowing the child object to reference the parent object.
- To Create a relationship between Jewel Customer & Customer Order Objects.
- Go to the setup page >> click on object manager >> type object name(Customer Order) in the quick find bar >> click on the object.
- Click on fields & relationship >> click on New.
- Select "Lookup relationship" as data type and click Next
- Select the related object " Jewel Customer ".
- Give Field Label as "Customer" and click Next.

Next >> Next >> Save.

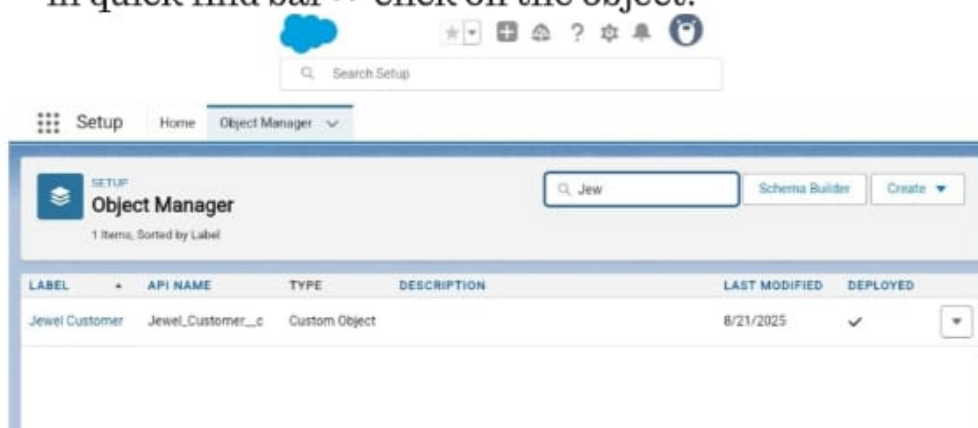

## Creating a Master-Detail Relationship

- Master-detail relationship is a type of relationship between two objects where the master object controls certain behaviours and settings of the detail object. Here are a few use cases that demonstrate the use of master-detail relationships
- Creating Master-Detail Relationship between Item & Customer Order Object.
- To Create a Master-Detail relationship :
  1. Go to the setup page >> click on object manager >> type object name(Customer Order) in the quick find bar >> click on the object.
  2. Click on fields & relationships >> click on New.
  3. Select "Master-Detail relationship" as data type and click Next.
  4. Select the related object " Item".
  5. Give Field Label as "Item" and click Next.
  6. Next >> Next >> Save.

## Creating Text Field in Jewel Customer Object

To create fields in an object:

Go to setup >> click on Object Manager >> type object name(Jewel Customer ) in quick find bar >> click on the object.

- Now click on “Fields & Relationships” >> New

The screenshot shows the Salesforce Setup interface. The left sidebar contains a navigation menu with options like Setup, Home, and Object Manager. The main content area is titled 'Jewel Customer' and 'Fields & Relationships'. It displays a table of fields with columns: FIELD LABEL, FIELD NAME, DATA TYPE, CONTROLLING FIELD, and INDEXED. The table lists fields such as City, Created By, Customer, Email, Last Modified By, Owner, and Phone. The 'City' field is highlighted, showing its details.

FIELD LABEL	FIELD NAME	DATA TYPE	CONTROLLING FIELD	INDEXED
City	City__c	Text(20)		
Created By	CreatedById	Lookup(User)		
Customer	Name	Text(80)		✓
Email	Email__c	Email		
Last Modified By	LastModifiedById	Lookup(User)		
Owner	OwnerId	Lookup(User,Group)		✓
Phone	Phone__c	Phone		

- Select Data type as “Text”.

The screenshot shows the 'Select Data Type' dialog box. It lists several data types with their descriptions: Phone, Picklist, Picklist (Multi-Select), Text (selected), Text Area, and Text Area (Long). The 'Text' option is highlighted with a blue circle.

- ☐ Phone: Allows users to enter any phone number. Automatically formats it as a phone number.
- ☐ Picklist: Allows users to select a value from a list you define.
- ☐ Picklist (Multi-Select): Allows users to select multiple values from a list you define.
- ☒ Text: Allows users to enter any combination of letters and numbers.
- ☐ Text Area: Allows users to enter up to 255 characters on separate lines.
- ☐ Text Area (Long): Allows users to enter up to 131,072 characters on separate lines.

- Click on Next

The screenshot shows the 'New Custom Field' dialog box. It is titled 'Jewel Customer' and 'New Custom Field'. The dialog is divided into two steps: 'Step 1. Enter the details' and 'Step 2. Enter the details'. The 'Step 2' tab is active, showing fields for 'Field Label' (City), 'Length' (20), 'Field Name' (City), and 'Description'. There are also fields for 'Help Text' and a 'Required' checkbox.

Field Label: City

Length: 20

Field Name: City

Description:

Help Text:

Required: ☐ Always require a value in this field in order to save a record

Fill the above as following:

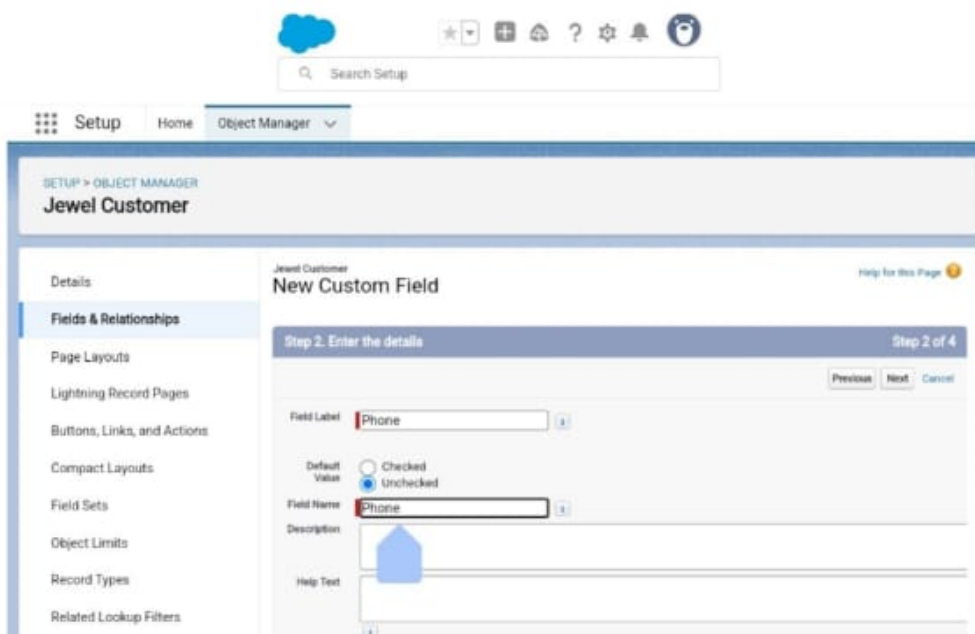

Field Label: City

Length : 20

Field Name : gets auto generate Click on Next >> Next >> Save and new.

## Creating the Phone field in object Jewel Customer

- Go to setup >> click on Object Manager >> type object name(Jewel Customer ) in quick find bar >> click on the object.
- Now click on “Fields & Relationships” >> Select Data type as “Phone” and click Next.
- Given the Field Label as “ Phone”.

The screenshot shows the Salesforce Setup interface. At the top, there's a navigation bar with 'Setup', 'Home', and 'Object Manager'. Below this, a search bar is visible. The main content area is titled 'Jewel Customer' and 'New Custom Field'. The left sidebar has a menu with 'Details', 'Fields & Relationships' (selected), 'Page Layouts', 'Lightning Record Pages', 'Buttons, Links, and Actions', 'Compact Layouts', 'Field Sets', 'Object Limits', 'Record Types', and 'Related Lookup Filters'. The 'New Custom Field' wizard is in progress, showing 'Step 2 of 4: Enter the details'. The 'Field Label' is 'Phone', the 'Default Value' is 'Unchecked', and the 'Field Name' is 'Phone'. The 'Description' and 'Help Text' fields are empty.

*FIELD NAME WILL BE AUTO POPULATED, AND CLICK ON NEXT >> NEXT >> SAVE & NEW.*

## CREATING THE EMAIL FIELD IN OBJECT JEWEL CUSTOMER

- Go to setup >> click on Object Manager >> type object name(Jewel Customer ) in quick find bar >> click on the object.
- NOW CLICK ON “FIELDS & RELATIONSHIPS” >> NEW
- Select Data type as “Email” and click Next.
- Given the Field Label as “ Email”.
- Field Name will be auto populated, and click on Next >> Next >> Save.

## CREATING PICKLIST FIELD IN ITEM OBJECT

- Go to setup >> click on Object Manager >> type object name(Item) in quick find bar>> click on the object.
- Now click on “Fields & Relationships” >> New
- Select Data type as “Picklist” and click Next.
- Enter Field Label as “Item Type”.
- In values select “Enter values(Gold,Silver), with each value separated by a new line” and enter values as shown below

The screenshot shows the Salesforce Setup interface for creating a new custom field for the 'Item' object. The left sidebar shows the navigation menu with 'Fields & Relationships' selected. The main content area is titled 'New Custom Field' and 'Step 2: Enter the details'. The 'Field Label' is 'Item Type'. The 'Values' section shows 'Use global picklist value set' selected, with a list of values: 'Gold' and 'Silver'. The 'Field Name' is 'Item\_Type'. The 'Description' field is empty.

**Click Next? Next ? Next ? Save .**

### Creating Currency Field in Price Object

- Go to setup >> click on Object Manager >> type object name(Price) in quick find bar >> click on the object.
- Now click on “Fields & Relationships” >> New.
- Select Data type as “Currency” and click Next.

The screenshot shows the Salesforce Setup interface for creating a new custom field for the 'Price' object. The left sidebar shows the navigation menu with 'Fields & Relationships' selected. The main content area is titled 'New Custom Field' and 'Step 2: Enter the details'. The 'Field Label' is 'Gold price'. The 'Field Name' is 'Gold\_price'. The 'Description' field is empty. The 'Help Text' field is empty.

- ENTER FIELD LABEL AS "GOLD PRICE" AND LENGTH AS " 8"AND DECIMAL 0.FIELD NAME WILL BE AUTO GENERATED

- CLICK NEXT >> NEXT >> NEXT >> SAVE .

#### Creating Formula Field(Cross Object) in Item Object

- Go to setup >> click on Object Manager >> type object name(Item) in quick find bar? click on the object.
- Now click on "Fields & Relationships" >> New.
- Select Data type as "Formula" and click Next.
- Give Field Label and Field Name as "Gold Price" and select formula return type as "Currency" and click next.

The screenshot shows the Salesforce Setup interface. In the left sidebar, 'Setup' is selected, and 'Object Manager' is chosen from the dropdown. Under 'Object Manager', 'Item' is selected. The 'Fields & Relationships' section is active, and 'New Custom Field' is being created. The 'Step 2: Choose output type' screen is displayed. The 'Field Label' is 'Gold price'. The 'Auto add to custom report type' checkbox is checked. The 'Formula Return Type' is set to 'Currency'. The 'Select one of the data types below' section shows 'Currency' selected. Examples for other data types are provided: Boolean (Example: TODAY() > CloudDate), Currency (Example: Gross Margin = Amount - Cost\_c), Date (Example: Summer Date = CloudDate - 7), DateTime (Example: Next = NOW() + 1), and Number (Example: Fahrenheit = 1.8 \* Celsius\_c + 32).

- Under Advanced Formula write down the formula :Prices\_\_r.Gold\_price\_\_c / 10.

The screenshot shows the 'Step 3: Enter your formula' screen. The 'Simple Formula' tab is selected. The formula entered is ':Prices\_\_r.Gold\_price\_\_c / 10'. The 'Insert Field' button is visible. The 'Insert Operator' dropdown is also visible. The 'Check Syntax' button is at the bottom right.

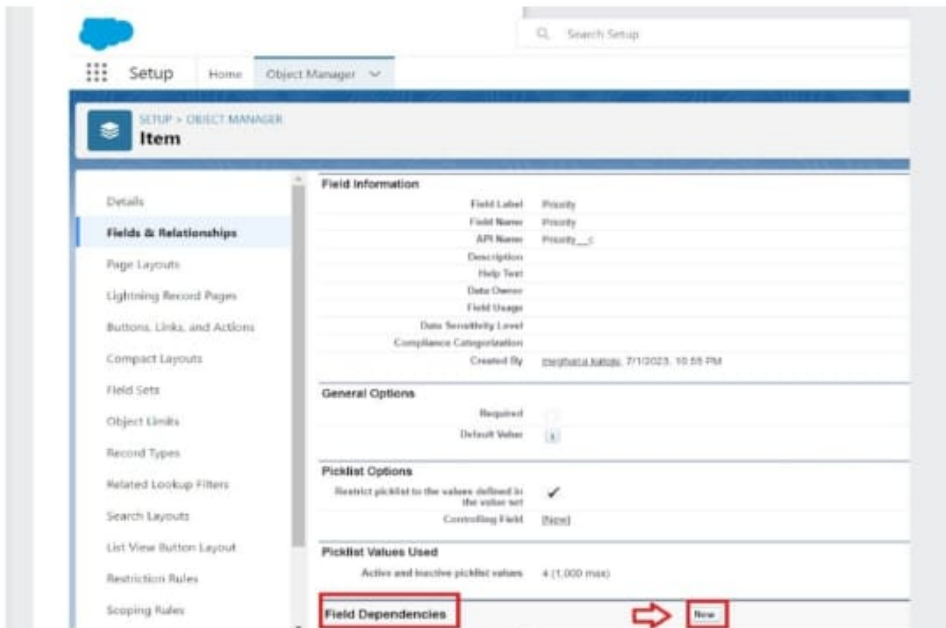

- click "Check Syntax" and Next >> Next >> Save & New.

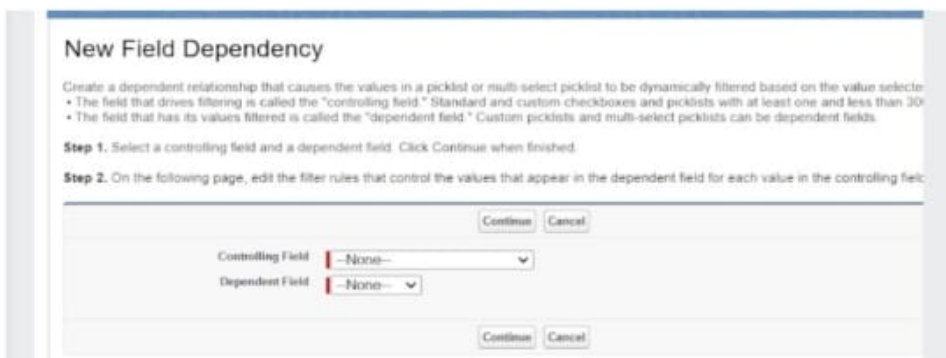

# Creating the Field Dependencie

## Use case:

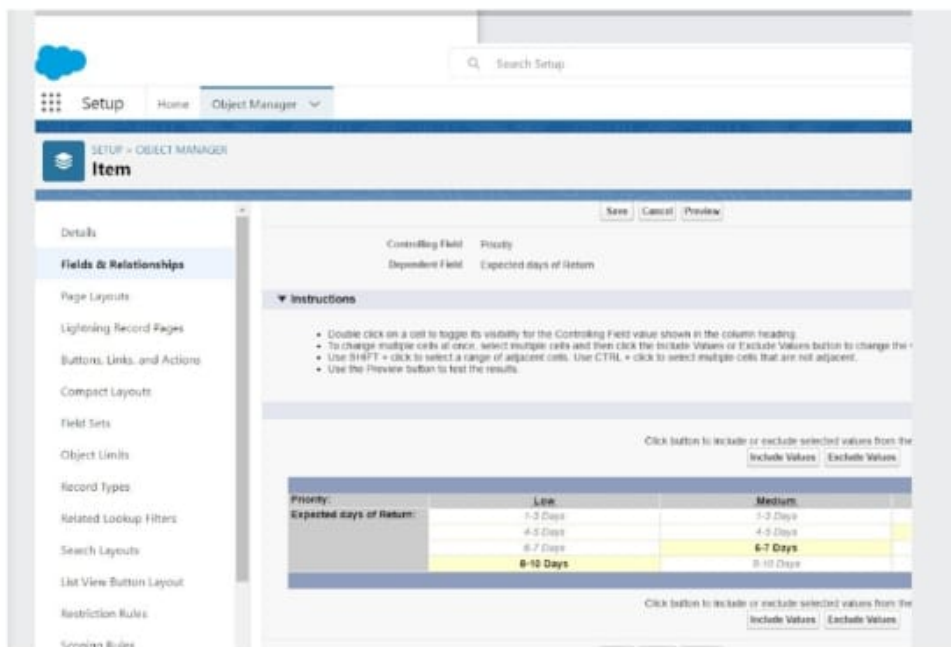

- Field Dependencies are used to create relationships between fields within an object. They allow you to control the visibility and availability of fields based on the values selected in other fields.
- Go to setup >> click on Object Manager >> type object name(Item) in quick find bar >> click on the object.
- Click on Fields & Relationships and click on the Priority field
- Search for Field Dependencies and click on New.

- **SELECT CONTROLLING FIELD AS "PRIORITY" AND DEPENDING FIELD AS "EXPECTED DAYS OF RETURN" >> CONTINUE.**

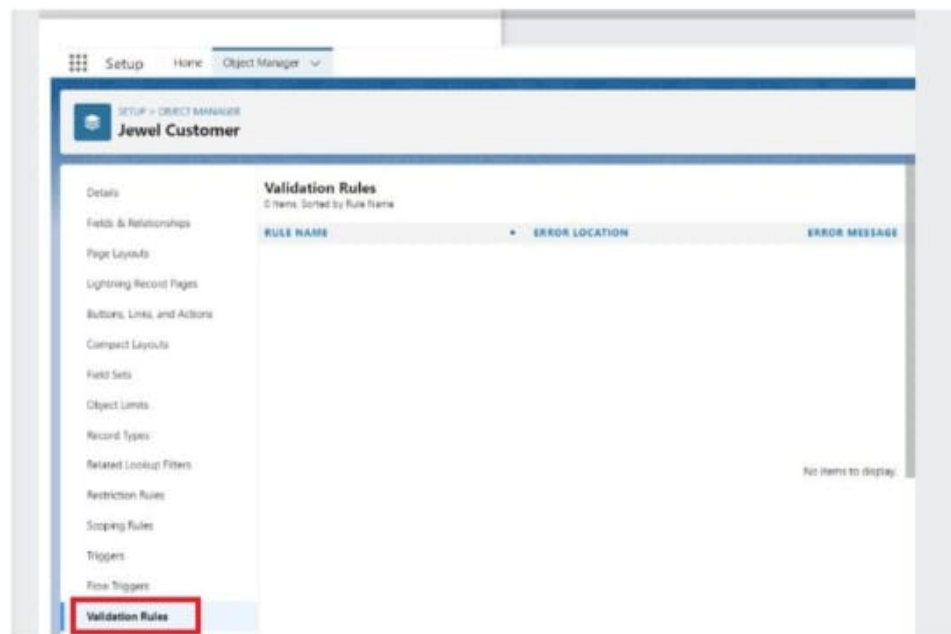

**Select the "Expected Days of Return" values of related Priority values and Click on Include Values >> Save**

## Creating the validation rule

- Go to setup >> click on Object Manager >> type object name(Jewel Customer ) in quick find bar>> click on the object.
- Click on the validation rule >> click New.

- Enter the Rule name as "Postal Code ".
- Insert the Error Condition Formula as : -
- Insert the Error Condition Formula as : -
- Insert the Error Condition Formula as : -
- AND(
- OR(
- LEN( Zip\_Postal\_code\_\_c ) <> 6,
- NOT(REGEX(Zip\_Postal\_code\_\_c, "^[0-9]{6}\$"))),
- NOT(ISBLANK(Zip\_Postal\_code\_\_c))
- )
- )

**Validation Rule Edit**

Rule Name: Postal Code

Active: ☒

Description:

**Error Condition Formula**

Example: Discount\_Percent\_\_c > 0.30 [More Examples...](#)  
 Display an error if Discount is more than 30%  
 If this formula expression is true, display the text defined in the Error Message area

Insert Field   Insert Operator

```

AND(
  OR(
    LEN( Zip_Postal_code__c ) <> 6,
    NOT( REGEX( Zip_Postal_code__c, \"^[0-9]{6}$\" ) )
  ),
  NOT( ISBLANK( Zip_Postal_code__c ) )
)

```

Check Syntax: No errors found

**Error Message**

Example: Discount percent cannot exceed 30%  
 This message will appear when Error Condition formula is true

Error Message: Must contain 6 digits

This error message can either appear at the top of the page or below a specific field on the page

Error Location: ☐ Top of Page ☒ Field Zip/Postal code

**Functions**  
 -- All Function Category  
 ABS  
 ACOS  
 ADDMONTHS  
 AND  
 ASCII  
 ASIN  
 Insert Selected Function  
 ABS(number)  
 Returns the absolute value of a number, a number without a sign.

- Enter the Error Message as “Must contain 6 digits”, select the Error location as Field and select the field as “Zip/Postal code”, and click Save.

#### Gold Smith Profile

- Go to setup >> type profiles in quick find box >> click on profiles ? clone the desired profile (System Administrator) >> enter profile name (Gold Smith) >> Save.

Activity 2: Create another Record Type with name “Silver” following the steps from Activity 1.

# permission set

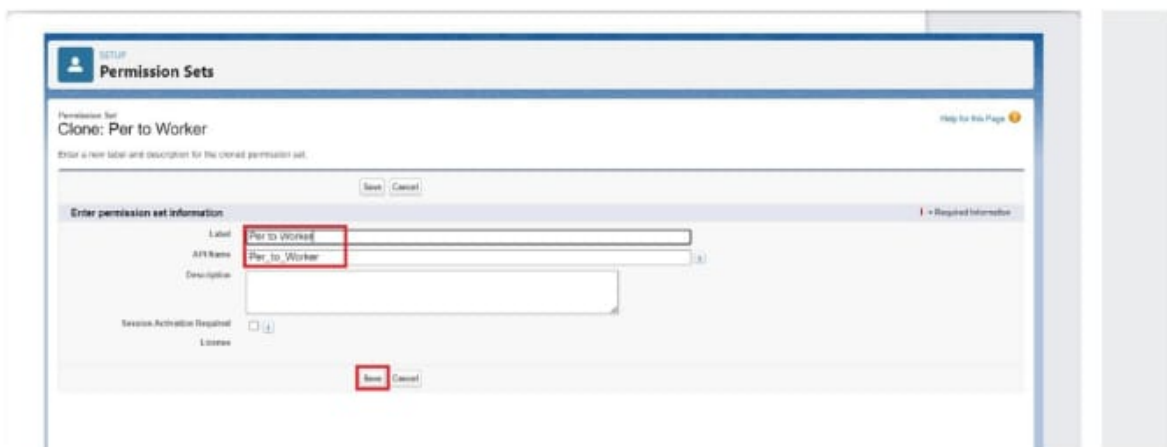

## Creating permission set

A permission set is a collection of settings and permissions that give users access to various tools and functions. Permission sets extend users' functional access without changing their profiles. Users can have only one profile, but depending on the Salesforce edition, they can have multiple permission sets.

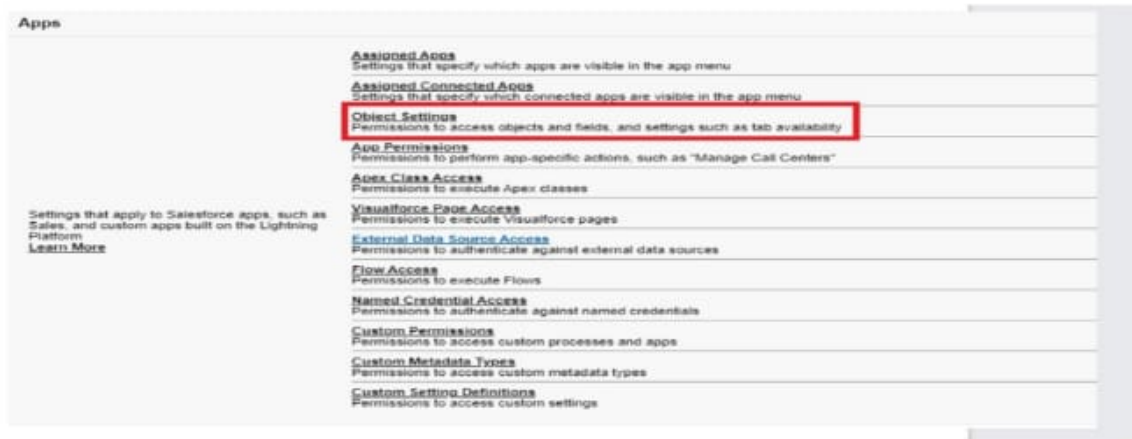

1. Go to setup >> type “permission sets” in quick search >> select permission sets >> New.

2. Enter the label name as “Per to Worker”, API will be auto populated?

3. Under Apps Select object settings.

4. Click on Items object ? click on Edit ? under Item:Record Type Assignments, enable Gold, Silver ? Object permission check for read, edit and create.

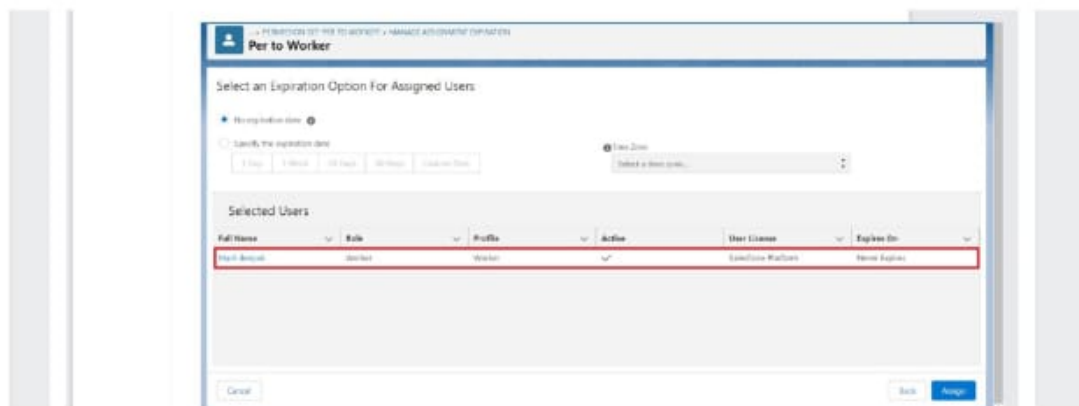

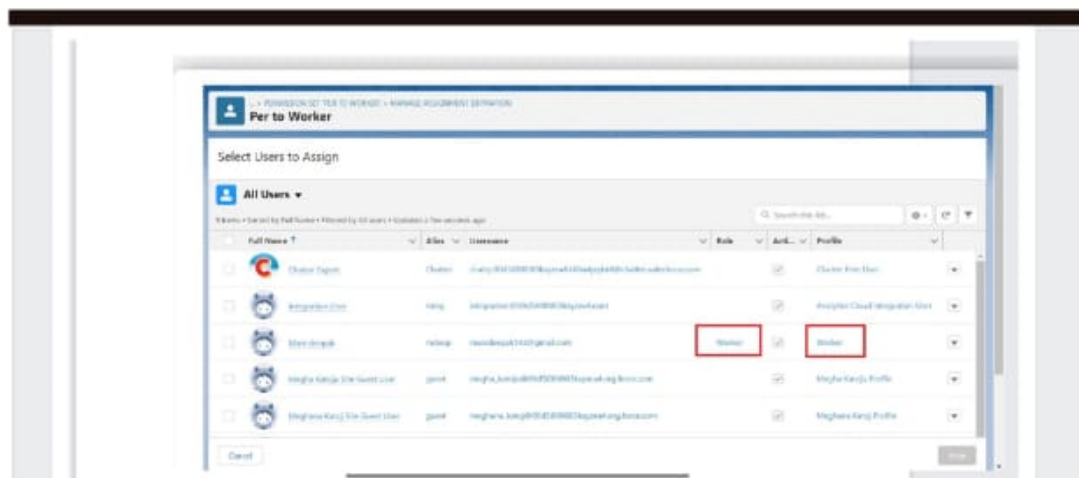

5. Click on Save.

6. After saving the permission click on the Manage assignment

7. Now click on the Add Assignment.

8. Now select the users which you have created in user milestone, using Worker profile and click on Next ? Assign? Done.

# Trigger

## Create a Trigger Handler class

### Trigger handler

A trigger handler is a design pattern that organises trigger logic into separate classes. This helps in keeping code organised, reusable, and easier to maintain. The trigger handler class contains methods that handle the specific logic for different trigger events, improving code structure and readability. This approach is particularly useful for complex triggers or projects with multiple triggers, as it promotes modular coding practices and reduces the chances of code duplication.

CODE:

```
public class UpdatePaidAmountTriggerHandler {

    public static void handleBeforeInsert(List<Billing_c> newBillings) {

        for (Billing_c billing : newBillings) {

            billing.Paid_Amount_c = billing.Paying_Amount_c;

        }

    }

    public static void handleBeforeUpdate(Map<Id, Billing_c> oldBillingsMap, List<Billing_c> updatedBillings) {

        for (Billing_c billing : updatedBillings) {

            Billing_c oldBilling = oldBillingsMap.get(billing.Id);

            Decimal oldPaidAmount = oldBilling.Paid_Amount_c;

            billing.Paid_Amount_c = oldPaidAmount + billing.Paying_Amount_c;

        }

    }

}
```

# Create the trigger

## CODE:

```
trigger UpdatePaidAmountTrigger on Billing_c (before insert,  
before update) {
```

```
    if (Trigger.isInsert) {
```

```
        UpdatePaidAmountTriggerHandler.handleBeforeInsert(Trigger  
        .new);
```

```
    } else if (Trigger.isUpdate) {
```

```
        UpdatePaidAmountTriggerHandler.handleBeforeUpdate(Trigg  
        er.oldMap, Trigger.new);
```

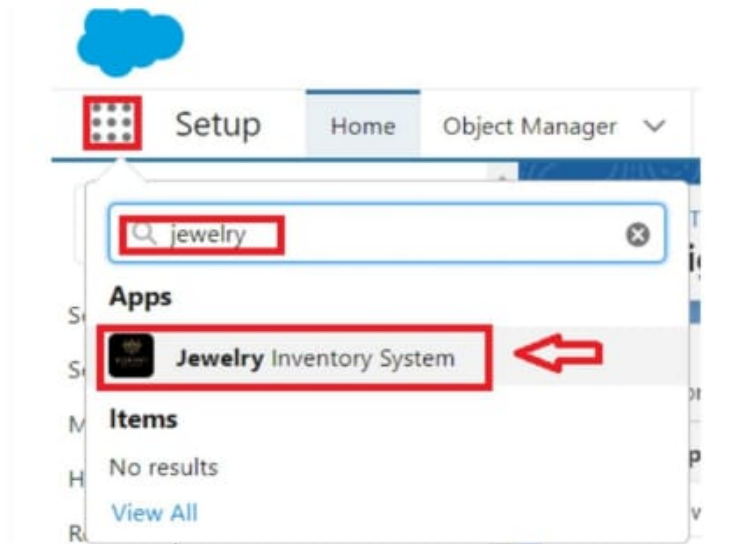

```
    }
```

```
}
```

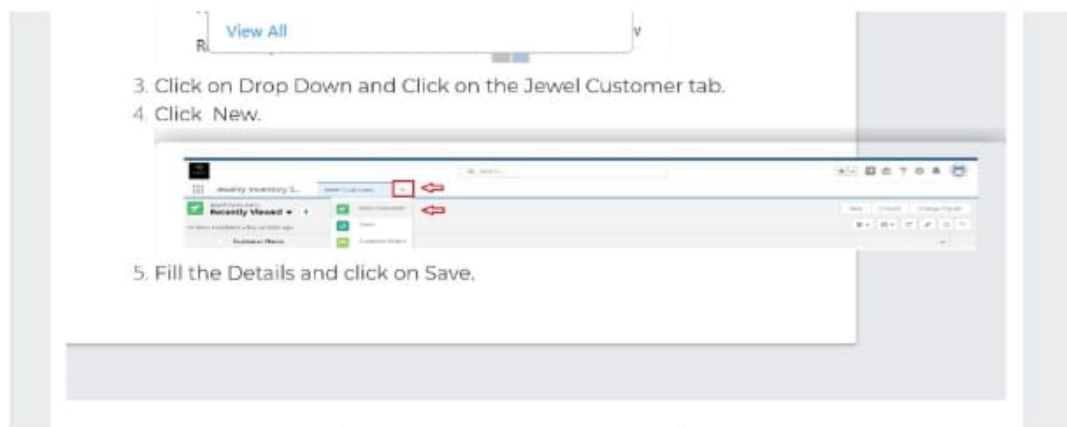

# User Adoption

## Create a Record (Jewel Customer)

1. Click on App Launcher on the left side of the screen.
2. Search Jewelry Inventory System & click on it.

3. Click on Drop Down and Click on the Jewel Customer tab.
4. Click New.

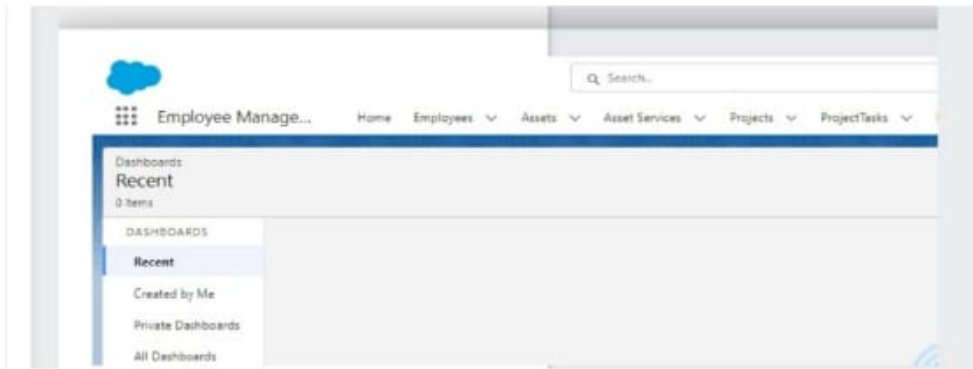

5. Fill the Details and click on Save.

# DASHBOARDS

## CREATE DASHBOA

- Go to the app >> click on the Dashboards tabs.

Give a Name and click on Create.

### New Dashboard

Private Dashboards

ACTIVITY 2: CREATE ANOTHER DASHBOARD AS WE DISCUSSED IN ACTIVITY 1.

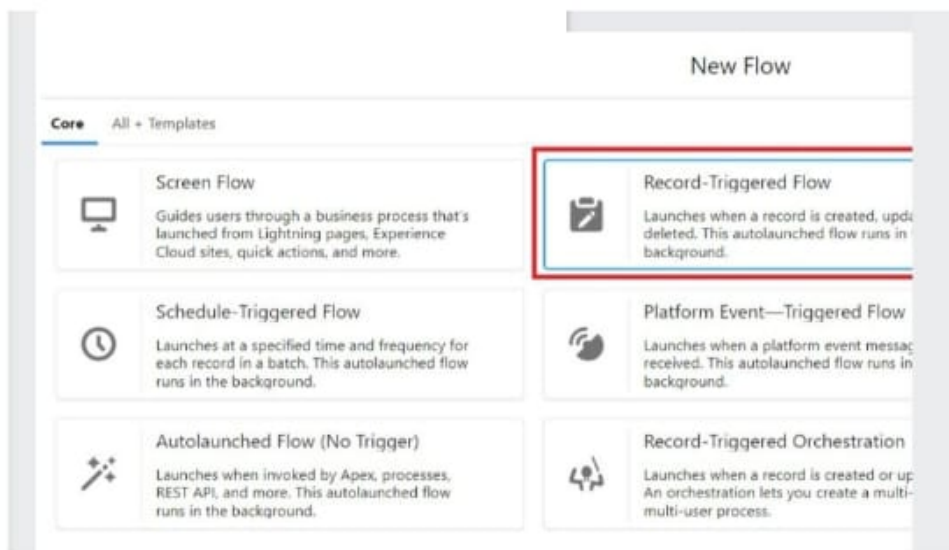

# FLOWS

## Create a Flow

- Go to setup >> type Flow in quick find box >> Click on the Flow and Select the New Flow.

- Select the Record-triggered flow and Click on Create.

- Select the Object as a "Billing" in the Drop down list.
- Select the Trigger Flow when: "A record is Created or Updated".
- Select the Optimise the flow for: "Actions and Related Records" and Click on Done

- Now change the mode from Auto-layout to free-form.
- Now select the manger option in the toolbox, click New resource.
- Select the resource type as text template.

**Configure Start**

Select Object  
Select the object whose records trigger the flow when they're created, updated, or deleted.

\* Object  
Billing

Configure Trigger  
\* Trigger the Flow When:

☐ A record is created  
☒ A record is updated  
☐ A record is created or updated  
☐ A record is deleted

Set Entry Conditions  
Specify entry conditions to reduce the number of records that trigger the flow and the number of times the flow is executed. Minimizing unnecessary executions helps to conserve your org's resources.

If you create a flow that's triggered when a record is updated, we recommend first defining entry conditions. Then select the **Only when a record meet the condition requirements** option for When to Run the Flow for Updated Records.

**New Resource**

\* Resource Type  
Select...

Variable  
Store a value that can be used and changed throughout the flow.

Constant  
Store a value that can be used but not changed throughout the flow.

Formula  
Calculate a value when the formula is used in the flow.

**Text Template**  
Store text that can be used and changed throughout the flow.

Stage  
Identify different phases in the flow to track user progress.

**Edit Text Template**

\* API Name  
EmailBody

Description

\* Body ⓘ  
Insert a resource...

Hello  
Customer Name: {!\$Record.Item\_\_r.Customer\_Name\_\_r.Name}

- Change the view as Rich Text ? View to Plain Text.
- In the body field paste the syntax that is given below.
- Now click on elements, and drag the action element into the preview pane.
- Give the label name as " notice"
- Enable the body in set input values for the selected action
- Select the text template that was created.

Save the flow
